

Users' manual of class file "cems-submit.cls"

April 8, 2022

This document is a brief illustration of the usage of L^AT_EX document class `cems-submit.cls` for submitting papers to *Communications in Economics and Mathematical Sciences*. The `cems-submit.cls` is slight modification of the standard document class `article.cls` of L^AT_EX, and hence most of commands of `article.cls` are available. The file `cems-sample.pdf` and `cems-sample.tex` are helpful for understanding the description below.

The following commands should be specified by the author(s).

<code>\title</code>	the title of the submitted paper
<code>\author</code>	the name(s) of the author(s)
<code>\date</code>	the date of submission
<code>\abstract</code>	the abstract of the paper
<code>\correspondence</code>	the email address with whom we communicate
<code>\keywords</code>	the keywords for the paper
<code>\JEL</code>	Journal of Economic Literature Classification Codes
<code>\MSC</code>	2020 Mathematics Subject Classification Codes

Among the commands above, `\JEL` and `\MSC` are optional, but it is desirable to specify them.

Style files `amsmath.sty`, `amssymb.sty`, and `amsthm.sty` are already loaded in `cems-submit.cls`, and environments of `theorem`, `proposition`, `corollary`, `lemma`, `proof`, `definition`, `remark`, `example`, and `axiom` are available without defining them. If you start proofs later like "Proof of Theorem xxx", you cloud use a format of proof environment such as

```
\begin{proof}[Proof of Theorem xxx]
  (state your proof here)
\end{proof}.
```

As for bibliography, the standard style is desirable, that is, if you use BibTeX, use the bibliography style *plain*. The references should be sorted by the alphabetical order of authors' names. Do not list references which

are not cited in the article. If you make bibliography manually, follow the plain style (cf. cems-sample.pdf).
